“WE BREED AND GROW GIANT
BLOOMS ONLY”

DR. A. B. SCOTT

FAIRMONT, WEST VA.

HILLCREST DAHLIAS

are grown in the hills of West Virginia, where the climate is ideal for Dahlia culture. The growing season is of nearly two hundred days. The days are hot and the nights are cool, a climatic condition which develops large tubers and matures the finest seeds.

The colors used in this brochure are taken from the latest Maerz and Paul Dictionary of Color.

The originations that we are offering are two and four year old seedlings. They have never been grown outside of the Hillcrest Gardens. Most of these introductions will be sent to the Storrs Trial Grounds next season. They are guaranteed, if properly fed, to grow giant blooms without the use of any nitrates.

Our tubers are excellent for propagation, as it is impossible to exhaust them. Our stock of these tubers is rather limited and orders will be filled in order in which they are received. When the supply is exhausted, checks will be immediately returned.

No seed for sale this year.

We will allow 33 1/3% discount on all items excepting those which are marked 'net'.

We will ship tubers any time requested, weather permitting.

No orders for plants accepted after March 1st.

Terms: Cash with order.
